## Share it

Often we want to share videos we have created or found with our colleagues or families. YouTube gives you all kinds of ways to share things.

Of course there is the ever more present facebook, twitter, google, + a whole lot more including my personal favorite, Pinterest. But if you are shy about these things you can always use the short URL, email or embed codes.

1. The short URL lets you start at a specific time in the video.
2. Embed code can be created to insert in web-pages or blogs and allows you to create a window of varying sizes.
3. Email will create and send an email from within YouTube.
4. You can leave comments on videos as well
5. And finally you can share playlists as easily as videos

## Playlists

You can add videos to a playlist or create a new playlist by clicking the "Add to" button beneath the video. Playlist are much like music playlist where videos will run consecutively or in a randomly assigned order. When you place something in your watch later list or your Favorites, it is automatically placed in a Playlist under that name. Often when you watch a video, it is a playlist or a video in a playlist series. These lists can be referred to or embedded or emailed just like a single video.
