Methods and Apparatus for Ocular Surgery

Inventors: Thomas Jennings, Colman Kraff, Terry Fuller

Description:
Provided are devices and methods for controlling fluid egress from the eye during ocular surgery, including an ocular seal that is signed to fit in an incision in an eye tissue such as the cornea or sclera and includes one or more lumen for passage of instruments into the eye without permitting loss of fluids through the incision. Also provided is a system for cataract surgery including a globe stabilization device, a laser lens removal device, one or more corneal seals, an infusion line, and an anterior chamber pressure monitor.

Patent Status: Patent Pending
