Physical-Chemical Property Based Sequence Motifs and Methods Regarding same

Inventors: Werner Braun, Venkatarajan Mathura, Catherine H. Schein

Description:
The invention relates generally to the analysis of sequence data. More particularly, the invention pertains to defining physical-chemical property (PCP) based sequence motifs common to a family of related proteins and/or the use thereof in analysis of sequence data (e.g., DNA, RNA, amino acids), such as, for example, searching genomic sequence databases to identify homologues of the family of proteins.
