EYE AND EAR EXAM

For this station, you will perform the following tasks:

EXAMINE THE TWO MANNEQUINS

1. Perform a fundoscopic examination of both eyes on the mannequin you will find in this room, using the ophthalmoscope located on the wall.

RIGHT EYE: This eye is NORMAL. Use it for comparison to the left eye.
LEFT EYE: After examining this eye, you will be asked to identify the pathologic findings and most likely diagnosis.

2. Perform an external auditory canal and tympanic membrane examination of both ears on the other mannequin you will find in this room, using the otoscope located on the wall.

RIGHT EAR: This ear is NORMAL. Use it for comparison to the left ear.
LEFT EAR: After examining this ear, you will be asked to identify the pathologic findings and most likely diagnosis.

You may not manipulate or reposition the mannequins from their original positions. You may move between mannequins and computer as needed.

RESPOND TO QUESTIONS

After examining the mannequins, you must move to the computer inside the room, log in using your student P number, and respond to the following questions:

Question 1
Select the most accurate description of your findings for the LEFT EYE

Question 2
Select the most accurate description of your most likely diagnosis for the LEFT EYE

Question 3
Select the most accurate description of your findings for the LEFT EAR

Question 4
Select the most accurate description of your most likely diagnosis for the LEFT EAR

You have 10 minutes to read this information, complete your examinations, and enter your findings.
You may enter the room when ready.
RECTUM/PROSTATE EXAM

For this station, you will perform the following tasks:

EXAMINE THE MANNEQUIN

Perform a rectum and prostate examination on the mannequin you will find in this room.

After examining this mannequin, you will be asked to identify the pathologic findings and most likely diagnosis.

You may not manipulate or reposition the mannequin from its original position. You may move between mannequin and computer as needed.

RESPOND TO QUESTIONS

After examining the mannequin, you must move to the computer inside the room, log in using your student P number, and respond to the following questions:

**Question 1**
Select the most accurate description of your prostate gland size

**Question 2**
Select the most accurate description of your prostate gland texture

**Question 3**
Select the most accurate description of your most likely prostate diagnosis

You have 10 minutes to read this information, complete your examinations, and enter your findings. You may enter the room when ready.
CARDIAC EXAM

For this station, you will perform the following tasks:

EXAMINE THE MANNEQUIN

Perform a cardiac auscultatory examination on the mannequin you will find in this room, using your stethoscope.

After examining this mannequin, you will be asked to identify the pathologic findings and most likely diagnosis.

You may not manipulate or reposition the mannequin from its original position. You may move between mannequin and computer as needed.

RESPOND TO QUESTIONS

After examining the mannequin, you must move to the computer inside the room, log in using your student P number, and respond to the following questions:

Question 1
Select the most accurate description of your heart sound (S1, S2, S3, S4) findings

Question 2
Select the most accurate description of your findings during systole

Question 3
Select the most accurate description of your findings during diastole

Question 4
Select the most accurate description of your most likely diagnosis

You have 10 minutes to read this information, complete your examinations, and enter your findings. You may enter the room when ready.
For this station, you will perform the following tasks:

**EXAMINE THE STANDARDIZED PATIENT**

Perform a screening breast exam (bilaterally) on the patient in this room. The patient is gowned appropriately, and the video monitoring that is being conducted satisfies the need of a chaperone for this examination.

You should introduce yourself, inform the patient of your planned examination, obtain her verbal permission, and proceed. You do not need to conduct a medical interview. After completing the exam, you should briefly discuss your findings with the patient before leaving the room.

You will be rated on your technique, patient draping, communication, and interpersonal skills during this examination. You will not record your findings or write an examination note as part of this task.

You have 10 minutes to read this information, complete your examination, and discuss your findings with the patient. You may knock and enter the room when ready.
