WOMEN VOLUNTEERS NEEDED
(AGES 65+)

RESEARCH STUDY ON POST-HIP FRACTURE

Researchers from the Sealy Center on Aging at UTMB need female volunteers for a new study to see whether testosterone therapy combined with resistance (weight) training exercise improves physical function after a hip fracture more effectively than resistance training alone, or a home-based exercise program.

- To participate in this trial, you must be a woman who is 65 years or older and recently had surgery to repair a hip fracture.
- Transportation provided!
