We wonder if it’s possible to grow new lungs.

Can we pump new life into a pair of lungs? It’s this kind of wondering that leads to real wonders at the University of Texas Medical Branch. Like the creation of complex site-specific cell development, giving us hope of someday producing replacement tissue for ailing lungs. It’s a revolutionary solution made possible only by performing as a committed team. And it’s how we approach every challenge at UTMB Health. Here, we bring different perspectives together, so we can make a difference in the lives of others. And often, the results are breathtaking. To learn more, visit utmbhealth.com.
